EEW secures planning consent for a 140MW Solar Farm

Eco Energy World (EEW) Australia, an Australian developer of utility scale solar projects, has received planning consent for the development of a 140MW solar farm near Marlborough.

EEW Chairman Svante Kumlin said: “We are so pleased for the Aramara area, and the Fraser Coast Region. This project will increase the utility solar generation by 140MW and will create new opportunities for the community including a large number of jobs and services.”

The solar farm will cover an area of 800 hectares and will comprise 440 photovoltaic modules or ‘solar panels’. The solar panels will be installed on ground mounted frames that will slowly track the daily horizontal movement of the sun. When operational, the solar farm will generate renewable energy to meet the annual power needs of approximately 37,000 average households.

The \$250m project construction is expected to start early 2017 and it will create up to 150 construction jobs, and when

operational, the facility will employ up to five full time and 10 part time positions.

EEW thanks Fraser Coast Regional Council for their collaboration on the project. This is an opportunity for the region to attract investment and further growth.

EEW Australia is developing a pipeline of 1GW over the next two years and have up to now secured land and connections of 440 MW of projects which are in planning. Mr. Kumlin says: "We have a unique business model which is based on merchant income model and not hold up the project for a PPA. Our experience in the UK began similarly with where the Australian market is today where we been very successful "

EEW Australia is a subsidiary of the EEW Holdings. The parent company has developed projects in the UK, Italy, Spain, Germany, France, and Sweden, has operational assets in Russia.

About Eco Energy World

Eco Energy World is an international developer of utility scale Solar Power Projects., Since our establishment in 2008 we have gained experience in all areas of developing solar power plants such as; green field development, technical

design, construction, structure finance & legal as well as manufacturing of solar panels.

The company has developed several hundred MW of projects in Europe including 20 large scale solar projects in the United Kingdom. We have currently 800 MW of solar projects in development in Australia.

EEW have offices and presence in London, Sydney, Monaco and Moscow. Our head office is located in London, Knightsbridge.
