

Sydney, 20th February 2017

EEW developing 280 MW Mega Solar farm in Queensland capable of exporting energy south of Queensland.

Eco Energy World (EEW) Australia, an Australian developer of utility scale solar projects, today announced their latest and largest project, a solar farm of 280 MW near Bouldercombe in Queensland.

The project will be interconnected to the transmission network, enabling it to transmit energy throughout Queensland as well as to New South Wales, Victoria and South Australia which has recently suffered from black outs and is in urgent need of energy supply.

EEW Chairman Svante Kumlin said: “We believe Queensland has huge potential for solar energy with its high irradiance, good infrastructure and availability of land. The Bouldercombe solar farm, will be able to supply clean energy not only to Queensland but also other states due to its unique location and technical design. We are so pleased for the Bouldercombe area, and the whole Rockhampton region. This project will increase the utility solar generation by 280MW and will create new opportunities for the community including many jobs and services.”

The proposed solar farm would cover an area 1,250 acres and comprises of 900,000 photovoltaic modules or ‘solar panels’. The solar panels will be installed on ground-mounted frames

that will slowly track the daily horizontal movement of the sun. Svante Kumlin further says: “The Solar Farm has been carefully designed with the latest technology and, in a second construction phase, energy storage will be added on enabling this plant to operate 24 by 7, fully replacing retiring fossil fuel energy generation”.

The \$500m AUD project construction can start as early as Q3 2017 and it will create up to 130 construction jobs. When operational, the facility will employ up to 6 full time and a number of part time positions.

EEW Australia is developing 1GW of solar farms in Australia planned over the next two years and have up to now secured planning consent for approximately 200 MW. The company plans to start construction of its first project, the 150 MW solar farm at Aramara, in March 2017.

EEW Australia is a subsidiary of EEW Holdings. The parent company has developed projects in the UK, Italy, Spain, Germany, France, Sweden and has operational assets in Russia.

About Eco Energy World

Eco Energy World is an international developer of utility scale Solar Power Projects., Since our establishment in 2008 we have gained experience in all areas of developing solar power plants such as; green field development, technical design, construction, structure finance & legal as well as manufacturing of solar panels.

The company has developed several hundred MW of projects in Europe including 20 large-scale solar projects in the United Kingdom. We have currently more than 1GW of solar projects in development.

EEW have offices and presence in London, Sydney, Monaco and Moscow. Our head office is located in London, Knightsbridge.
